

CC Series

Product Description

The CC Series foils are a high gloss series developed for rubber die tipping onto rigid PVC cards, and work well for plastic decorating of fine lines on handles and flat parts. These foils feature an easy release from the carrier and have excellent abrasion, chemical resistance and tape adhesion, making it a good choice for a wide number of applications.

CC Series foils can be applied inline, onto extruded plastic parts and moldings and are specially formulated for vertical stamping, and fine line decoration.

Substrates

- Acrylic
- Butyrates
- Noryl
- Nylon
- Polycarbonate
- Rigid PVC

Physical Proprieties

- Carrier: 48 gauge (12 microns), 75 gauge (19 micron) polyester
- Application area: Fine line detail

Recommended Stamping Conditions

	Metal Die	Rubber Die
Temperature	275° - 325° F / 135° - 160°C	325° - 375° F / 160° - 190°C
Dwell	0.2 – 0.7 Seconds	0.5 – 1.0 Seconds
