

CT Series

Product Description

The CT Series foils are a high gloss abrasion resistant series developed for metal die marking onto flexible polyurethane livestock cattle tags. The unique advantage of this product over other types of hot stamp foils available for this application is its ability to sublime or impregnate the surface. This feature provides legible marking even when the entire tag top surface is worn away.

CT Series foils feature easy release along with excellent abrasion and chemical resistance. Foils can be applied inline, onto extruded plastic parts and moldings and are specially formulated for vertical stamping.

Substrates

- Polyurethane Livestock Tags

Physical Properties

- Carrier: 92 gauge (21 micron)
- Application area: Fine, medium and broad coverage

Recommended Stamping Conditions

| | |
|-------------|------------------------------|
| | Metal Die |
| Temperature | 325° - 425° F / 160° - 220°C |
| Dwell | 0.4 – 1.5 Seconds |
