

## GG Series

### Product Description

The GG Series metallic foils is a high opacity gloss foil developed for metal die stamping onto coated paper stocks. This series also stamps very well with a rubber die on various substrates. GG Series foils provide easy release and offer excellent abrasion making it a good choice for a wide number of applications.

GG Series foils are often applied inline, onto extruded plastic parts and moldings, and are specially formulated for vertical or roll-on stamping.

### Substrates

- Polyethylene
- Polypropylene
- Styrenics

### Physical Properties

- Carrier: 48 gauge (12 microns)
- Application area: Fine, medium and broad coverage

### Recommended Stamping Conditions

Substrates		Metal Die	Rubber Die
Coated Paper Stocks	Temperature	200°- 245°F/90° -115°C	N/A
	Dwell	0.2 – 0.7 Seconds	NA
Polycarbonate, PVC, Styrenics	Temperature	275° -325°F/135 - 160°C	325° - 375°F / 160° - 190°C
	Dwell	0.3 – 0.8 Seconds	0.5 – 1.0 Seconds
