## Magnetic Stripe Overview

CFC produces magnetic tapes in “MG T”, “H”, “L” and “P” versions for ease of application on various hot stamp, transfer and lamination equipment.

- **“MG T” Series** – for total transfer from the polyester carrier on a PVC cap sheet, these tapes are applied directly to the vinyl overlay. The polyester carrier is stripped away from the overlay prior to laminating. MG T Series tapes are designed for Louda and other similar tape layer equipment.
- **“H” Series** – specially formulated for hot stamp, roll-on application transfer on finished single cards made from PVC/PVA blends and rigid vinyl. H Series tapes are applied using a heated steel wheel on Franklin or similar equipment.
- **“L” Series** – for total lamination, L Series tapes are applied directly to the vinyl overlay as a total package. The thin polyester film provides integrity and tensile strength to the stripe. L Series tapes are designed for use on Oakwood and other similar equipment.
- **“P” Series** – P Series foil products are designed for hot stamp, roll-on application to paperboard and book cover materials for applications like bank passbooks.

NOTE: Instructions given herein are approximate and adjustment may be required in adapting materials for use in any specific application. The data presented is a result of careful and extensive research. However, since the actual conditions under which the materials may be used are beyond our control, no warranty of any kind, expressed or implied, concerning the use of the products is made.
