

## PY(-17) Series

### Product Description

The PY (-17) Series metallic foils are developed for stamping onto polyolefins and are primarily used for cosmetic packaging decoration. PY(-17) foils feature an easy release from the carrier, and have excellent abrasion and chemical resistance.

PY (-17) Series foils are often applied inline, onto extruded plastic parts and moldings, and are specially formulated for vertical or roll-on stamping, and fine line decoration. PY (-17) foils contain no heavy metals and are in compliance with all "Heavy Metals in Packaging" legislation.

### Substrates

- Polyolefins

### Physical Properties

- Carrier: 48 gauge (12 microns)
- Application area: Fine, medium and broad coverage

### Recommended Stamping Conditions

	Metal Die	Rubber Die
Temperature	250° - 300° F / 120° - 150°C	325° - 375° F / 160° - 190°C
