

PIGMENTED and METALLIC FOILS

Quality and Versatility

The markets for CFC's pigmented and metallic foils require a durable and functional coating. Since many of these products are parts that are used again and again, over an extended period, the imprint must be long-lasting and provide aesthetic value as well. Many of CFC's pigmented and metallic foil's coatings therefore are produced with a state-of-the-art, ultra-violet curing process, which results in higher abrasion and chemical resistance.

These metallic and pigmented products are primarily used on applications in the plastic, cosmetic and graphic industries where consistency in color, appearance and workability is key. CFC's pigmented and metallic foils provide that value-added functionality to your products.

CFC's pigmented and metallic foils are formulated for the specific demands that these coatings are applied to, meeting the rigorous requirements of the plastics industry as well as the challenging applications of the graphics industry.

NOTE: Instructions given herein are approximate and adjustment may be required in adapting materials for use in any specific application. The data presented is a result of careful and extensive research. However, since the actual conditions under which the materials may be used are beyond our control, no warranty of any kind, expressed or implied, concerning the use of the products is made. Date: 06/30/04.
