

PRINTED PRODUCTS

Overview

CFC manufactures decorative and functional heat-transferred or laminated printed pattern foils that can be applied to either wood or plastic substrates. Our multi-layer, complex coatings have the look of real woodgrain finishes, marbles, granites, metals, solid colors and geometric designs. Our printed products offer superior print quality and are easily transferred or laminated onto a wide variety of plastic or wood substrates, at a broad range of speeds and temperatures.

Our heat transfer foils and laminates possess industry-leading performance properties where an attractive and durable finish is required.

In addition, CFC offers custom slitting of our EB Foils, and foils can be slit to the width and length that suits your application best. Widths can range from 1/8", 1/16" to 50" and come in 1/8" increments. Lengths range from 1,000' to 5,000' increments with 1" and 3" cores available. CFC's EB Foils are designed for razor slitting and CFC **does not** recommend log or baloney cutting of our EB Foils.

Features

- Outstanding workability
- Superb print quality and color consistency
- Available in a wide array of colors and patterns
- Full range of decorative coatings so you can achieve a 100% custom color and pattern match
- Produced in ISO9001/2008 Registered QMS facilities

Markets Served

CFC's printed products serve the following industries among others:

- Furniture
- Manufactured housing
- Building materials
- Cabinets/doors
- Trophy/plaques
- Picture frames
- Moldings/accents
- Window treatments
- Door panels
- Home decorating
- Automotive (interior)
- Toys
- And many more

PRINTED PRODUCTS

Quality and Versatility

CFC's printed products allow you to achieve the perfect match with our total family of decorative coatings.

EB Foils®

Decorative and functional heat-transferred foils that can be applied to real and engineered wood substrates, at a broad range of temperatures and speeds. These multi-layered, complex pattern coatings have the look of real woodgrains, marbles and granites, solid colors and geometric designs.

EBMT Series

From elegant and upscale, to comfortable and warm, EBMT Series metallic foils allow you to create components that are beautiful, durable and designed to appeal to a wide array of consumers. These products come in variety of metal shades and prints like Antique Bronze, Crosshatch Silver or Florentine Copper.

Exterior Foils

CFC offers a wide array of weather-resistant hot stamp foils for plastic substrates that are specially formulated for exterior applications such as window treatments, siding, molding and exterior doors. These products offer outstanding durability and resistance to UV exposure.

NEOCLAD®

A non-PVC laminate that is highly thermoformable. NEOCLAD is capable of decorating intricate, three-dimensional surfaces, relief patterns and parts.

WB, WR, AC Series

These foils are formulated to apply an overall decorative finish to a variety of plastic and coated substrates. Also available in formulation for flexible extruded semi-rigid or flexible PVC profiles like T-moldings or edgebanding.

NOTE: Instructions given herein are approximate and adjustment may be required in adapting materials for use in any specific application. The data presented is a result of careful and extensive research. However, since the actual conditions under which the materials may be used are beyond our control, no warranty of any kind, expressed or implied, concerning the use of the products is made.
